

# NEW REPAIR & SYSTEM TEST CAPABILITY

## Siemens 611U AC Servo Test System

*Technical Bulletin*

K+S Oakville is pleased to announce it's new test capability for the Siemens 611U AC servo / spindle test system. This system consists of a 55kW infeed power supply module as well as several ranges of amplifier power modules. This system utilizes several different types of control interface cards that allow the operation of virtually any Siemens AC servo or spindle motors. Whether the motor has an encoder, resolver or analog type of feedback, this system can provide full test diagnostics to ensure a quality repair every time.

**12 Month In-Service Warranty**

**All Units Are System Tested**

**No Charge Evaluation**
