

NEW REPAIR & SYSTEM TEST CAPABILITY

TOLOMATIC SERVOWELD ACTUATOR

Technical Bulletin

K+S Services has developed a dedicated Test Stand allowing for “closed loop” testing of the Tolomatic Servoweld Actuators. With this test configuration, K+S can control weld time duration and measure the force at the weld tip while monitoring the actuator current draw to verify proper functionality. All units are completely disassembled, cleaned, each component is thoroughly inspected and only OEM spec parts are used in the repair.

12 Month In-Service Warranty

All Units Are System Tested

No Charge Evaluation
